

Career Essentials for Health Sciences

Instructions for Course Implementation at the Two Year Campuses

Included in this Box folder are all of the files you will need to build this Career Essentials for Health Sciences course in to the Learning Management System (LMS) at your campus.

This document should help you with the assembly of these files. You will need to create several LMS-generated fields with several of these documents in order to get the reporting necessary for each student who takes the course. This pass/fail information will need to be transmitted to the registrar on your campus. More information about this will be provided by the committee who oversaw the design of this course.

These documents are included in this folder:

[Career Essentials for Health Sciences Modules 1-5](#)

[Career Essentials for Health Sciences Module 1-5 Assessments](#)

[Career Essentials for Health Sciences Module Feedback Form](#)

Career Essentials for Health Sciences Modules 1-5

- As Word documents
- As SCORM packages
- As HTML5 zip files

The content of these modules was created by a committee and a curriculum designer. Each module includes text, images and links to YouTube videos. A program called Rise, and [Articulate 360](#) product, was used to create the SCORM and HTML5 versions of this content, which look great and are very interactive for students. No matter what your Learning Management System, you should be able to integrate one of these file types. In Moodle, for example, you can embed the Rise files as webpages in each topic, or load a SCORM package under each topic.

It is advised that when creating this course in your LMS that you break it into topics for each Module. There should be 5 total Modules. Under each Module there will be a link or package for the content. Under that, the assessment for each Module will be built into your LMS as a test or quiz. Underneath that the Module evaluation should appear. For example:

MODULE 1 (topic)

- Career Essentials for Health Sciences Module 1 (Webpage or SCORM file with content)
- Module 1 Assessment (built into your LMS)
- Module 1 Evaluation (built into your LMS)

If you cannot get the SCORM packages or HTML files to load and display, you can always refer to the Word versions of the course content and work with those.

You will need to build the assessments and evaluations into your LMS with the content of the Word files that have been provided.

Career Essentials for Health Sciences Module 1-5 Assessments

You will find the Word versions of these assessments in this Box folder. Each assessment will need to be built into your LMS directly. Configure the pass/fail score based on the instructions included. For example, in Moodle, a test or quiz can be added under each topic. Make sure the student does not continue to the next Module without taking each assessment. Building these assessment in and configuring them correctly is important, since each student's pass/fail information will be communicated to the registrar on your campus.

Career Essentials for Health Sciences Module Feedback Form

Please build this feedback form into your LMS directly. The data collected will be referred back to the committee that created this course. Please collect the feedback data and store it. Further instructions will follow.
