

# COMPUTER INFORMATION SYSTEMS

Computers are all around us, working together in complex networks. They store information, improve business processes, facilitate social networking, and even power our smart phones. When computer information systems fail to work properly, information gets lost, businesses lose money, and communication breaks down. Managing and repairing these devices and networks is a lucrative opportunity for those with the necessary skills.

There are many different career paths in computer information systems. You could work for a large enterprise, a hospital or doctor's office, a small business, or even your own company. Possible job titles include: **Helpdesk Technician, Computer Technician, Network Administrator, Server Administrator**, and many others.

## WHY JEFFERSON COLLEGE?

The Computer Information Systems – Computer Support Certificate is designed to give you the skills you need, along with the respected industry certifications employers look for. Courses will help you prepare for CompTIA's A+ Computer Technician and Network+ Network Technician certifications, which you will earn throughout an accelerated, 28 week program.

Upon completion, you will receive a Certificate from Jefferson College, and coursework can be applied to an Associate of Applied Science Degree if you wish to further your education.
