

## Assignment 2 Project Declaration

For this week's assignment I want you to start thinking on your final project. We have not discussed the final project much however you have been doing some components of it within the assignments. For this project what you are going to do is select a business and analyze some form of user interface that they have in use. You are going to take this interface and then decide on how you can improve upon its design based on the information gathering procedures that we have discussed in class. If the interface is beyond hope in your eyes you can also develop an entirely new system.

1. For this assignment you are going to be asked to decide on a business and the interface that you might potentially select. Answer the following questions:
2. What is the business you are considering?
3. What is the specific interface that you are planning on examining?
4. How is it used within the business?
5. What areas does the interface do well?
6. Are there any known problems with the interface?
7. What methods are you planning on using to gather information and requirements?
8. What are your next steps as to the work on this project?
