

Bay College students are ready to work in robotics.

“It’s awesome, all the different things you can do with the robotics,” said Andrew Vandermissen. “I know how all the different parts work together and how the robots move and their applications for the real world. It’s got me really psyched to go into the job field with this certificate and degree.”

Eight Michigan community colleges formed the Michigan Coalition for Advanced Manufacturing (M-CAM) to enhance and create training programs in the in-demand areas of welding/fabrication, CNC machining, production operation and multi-skilled/mechatronics.
