

Lansing Community College students have bright futures in manufacturing.

“The M-CAM program has changed my life,” Phillip Dahlhofer said. “It’s allowed me to have a better job and to get off the assembly line into a better position at work where I have more of a future and better earning potential. I feel very excited about my future now.”

Eight Michigan community colleges formed the Michigan Coalition for Advanced Manufacturing (M-CAM) to enhance and create training programs in the in-demand areas of welding/fabrication, CNC machining, production operation and multi-skilled/mechatronics.
