

# Schoolcraft welding students are in demand.

*“I took a one semester class just to see if I liked welding and I fell in love and here I am,” said Michelle Riley. “The faculty not only has a wealth of information in manufacturing, they’ve taken a genuine interest in me and my career. I couldn’t get anywhere before without the proper training. Thanks to M-CAM at **Schoolcraft**, employers are coming after me instead of me going after them.”*

Eight Michigan community colleges formed the Michigan Coalition for Advanced Manufacturing (M-CAM) to enhance and create training programs in the in-demand areas of welding/fabrication, CNC machining, production operation and multi-skilled/mechatronics.
