Page 1: After reviewing the LB iLearn course, complete the following questions based on your expertise.

Q1 What is the name of the course you are evaluating?

CIS 125D Introduction to Databases

Q2 Describe the background, expertise, experience, qualifications and education that make you qualified as a Subject Matter Expert to review this course.

See resume/vita.

Q3 Are the outcomes for the course appropriate to what students should be able to do or know to be successful in the profession and/or field?

Yes,

Explain.:

The outcomes in the modules introductions do not restate/match the 4 outcomes on the home page. All other courses mapped specific outcomes listed on the home page to the course outcomes on the module introduction or credit union introduction.

Q4 Do the skills taught in the course prepare students for the profession? **Yes**

Q5 Does the course holistically contain appropriate content related to the profession? **Yes**

Q6 What recommendations so you have for improvement that would make the course better align with the profession?

Learning to develop/design a proper database is very important when making relationships later. It would be nice to add a lecture and practice activity on ER diagramming, and have them reinforce the concept as the initial stage for a bigger project designing their own database in this course.

Q7 What content needs to be developed to meet upcoming industry needs?

It would be nice to introduce MySQL, since it is open source and gives an example of a non-Microsoft database.
