

Course Objectives: ELAP 1510, Electrical Apprenticeship 1

Program Description:

The Electrical Apprentice program (ELAP) consists of eight courses, spanning a four year (8,000 hour) working apprenticeship. The ELAP program meets classroom training requirements for Apprentice Electricians registered with the Wyoming State Fire Marshal's Office. The program (student) outcomes are as follows:

1. Utilize the National Electrical Code (NEC) for electrical design and installation
2. Interpret electrical drawings
3. Design motor control circuits
4. Apply electrical theory to practical electrical problems

Each student completes one course per semester (Fall and Spring) for four years while employed as an apprentice electrician. The program is designed to assist apprentices in obtaining the skills and knowledge needed to pass the licensing exam at the end of their apprenticeship and to be successful as licensed Journeymen.

Course Purpose:

ELAP 1510 Electrical Apprenticeship I is the first in a series of eight ELAP classes. Topics include an orientation to the electrical trade, electrical safety, electrical theory, device boxes, and conduit bending. The application of the National Electric Code (NEC) is incorporated throughout the course.

Course Outcomes:

Upon completion of ELAP 1510 Electrical Apprenticeship I, the student will:

1. Demonstrate safe electrical work practices
2. Solve basic electrical theory problems
3. Apply the NEC to basic electrical installations
4. Calculate proper sizes of device boxes and enclosures
5. Perform basic calculations related to conduit bending

Program Outcomes *(targeted in this course):*

1. Utilize the National Electrical code for electrical design and installation
2. Apply electrical theory to practical electrical problems
