

Process Technology

Accelerated 11-week program at Casper College!

A certificate in process technology demonstrates a student has achieved a base level of knowledge that can be applied to the job. Students with additional college-level education or strong skills in math, science and/or engineering will gain a leading edge for employment in the process technology field.

This intensive, on-campus certificate program prepares students for employment in petrochemical, electrical power, oil and gas refining, and other process technology career fields. Students will obtain a foundation of knowledge in mechanical, electrical and process technology areas, and will learn technical and safety aspects of the industry. Upon successful completion they will also be issued an OSHA General Industry 10-hour card, becoming more competitive in the job market.

Casper College also partners with statewide industry leaders to provide our students with hands-on training experiences and exposure to potential employers in these careers fields. Program begins Monday, March 7, 2016.

This product was funded by a grant awarded by the U.S. Department of Labor's Employment and Training Administration.
