

# Maintenance Technician

## Short-Term Technical Certificate

### Program offered at Lorain County JVS

## Program Overview

### The Maintenance Technician Certificate

trains individuals to repair, troubleshoot, and maintain automated equipment commonly used in industry.

Within this field, there are a wide range of functions related to the control and maintenance of production, distribution and/or manufacturing conducted by automated processes. Individuals working in companies may develop and test industrial process control systems, conduct the installation and operation of such systems. They may calibrate operating systems and components and troubleshoot for improvement and functionality of these systems. Others work with programmable logic controllers involving work with special-purpose computers to synchronize all of the technologies used for a manufacturing process.

Mass production is the basis for most every business, from car companies to computer giants. The automation industry is one of the fastest growing areas of our national and international high-technology economy. It combines the fields of electronics, electrical, and mechanics and includes the interaction and control of motors, computers, pneumatics, hydraulics and other processes used in manufacturing.
