

Analysis of Post-Completion Survey Export Through Spring 2017

INTRODUCTION

Surveys were administered to Ohio TechNet (OTN) participants who completed a grant program during the grant period prior to Spring of 2017. Responses were received between November 2016 and April 2017. The goal is to gain information about the post-completion employment of participants and changes in employment from before enrollment in an Ohio TechNet grant-affected program. The survey will be administered three times per year for the remainder of the grant's performance period.

The analysis below is comprehensive but may not be exhaustive. Some items from the full survey may not receive treatment below because they lacked enough clear response to report. Extensions to this work can be completed if there is a reason to pull additional items into the analysis as the survey gains more responses.

SUMMARY

Of survey respondents, prior to enrolling in an OTN program, 30% were employed in their field of study. Many had been working in their present job for years, in fact 15% of them for 10 years or more. Only 13% of respondents reported earning less than \$12/hour, and 21% reported working less than 40 hours/week. Approximately half of respondents had benefits available to them (49% for paid time off and 52% for healthcare).

During their program, respondents tended to be employed (62%). They did not tend to be involved in apprenticeships (2%) or utilize colleges' career services centers (15%). Somewhat more, but still a minority, saw an academic counselor or advisor (39%). Of survey respondents, 10% received college credit for prior learning.

After completing their program, respondents were more likely to be employed in their field of study than they were at the start of their program (55%). Of those who had changed jobs, a majority (65%) considered their new job to be a career advancement and availability of benefits to them were higher (59% for paid time off and 76% for healthcare).

Overall, respondents believed that their program would lead to career advancement in the future (70%) and would recommend their program to others (75%).

SURVEY RESPONSES

In total, there were 109 responses to the survey that were submitted for analysis. However, many responses were removed from the analysis. The two primary reasons for removal were that a respondent indicated they were not a completer or responses were substantially incomplete beyond the initial survey page. After these exclusions, there are 61 survey responses. The count of survey responses by college:
