Technical Standard Order

Subject: DATA LINK RECORDER SYSTEMS

1. PURPOSE. This technical standard order (TSO) is for manufacturers of data-link recorder (DLR) systems applying for a TSO authorization or letter of design approval (LODA). In it, we (the Federal Aviation Administration, or FAA) tell you what minimum performance standards (MPS) your data-link recorder system must first meet for approval and identification with the applicable TSO marking.

2. APPLICABILITY.
   a. This TSO affects new applications submitted after this TSO’s effective date.
   b. Major design changes to DLR systems approved under this TSO will require a new authorization. See 14 CFR § 21.611(b).

3. REQUIREMENTS. New models of DLR systems identified and manufactured on or after the effective date of this TSO must meet the MPS in the European Organization for Civil Aviation Electronics’ (EUROCAE) publication ED-112, *Minimum Operational Performance Specification for Crash Protected Airborne Recorder Systems*, dated March 2003. The table below lists recorder types and the ED-112 chapter and part containing the MPS for each:

<table>
<thead>
<tr>
<th>Recorder Type</th>
<th>ED-112 Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single DLR</td>
<td>Chapter 2 and Part IV</td>
</tr>
<tr>
<td>DLR function in a deployable recorder</td>
<td>Chapter 2, Chapter 3 and Part IV</td>
</tr>
<tr>
<td>DLR function in a combined recorder</td>
<td>Chapter 2, Chapter 4 and Part IV</td>
</tr>
</tbody>
</table>

NOTE: Requirements pertaining to aircraft level equipment installation, test, and maintenance are not minimum operational performance specifications for DLR systems. Therefore, they have been excluded.
a. **Functionality.** This TSO applies to equipment intended to receive, process, record, preserve, and retrieve communication, navigation, surveillance/air traffic management (CNS/ATM) digital messages transmitted to and from the aircraft for accident or incident investigations.

b. **Failure Condition Classification.** Failure of the function defined in paragraphs 3 and 3.a of the TSO is a *minor* failure condition. Develop the system to at least the design assurance level equal to this failure condition classification.

c. **Environmental Qualification.** Test the equipment according to RTCA, Inc. document RTCA/DO-160E, *Environmental Conditions and Test Procedures for Airborne Equipment*, dated December 9, 2004, or the most current revision.

d. **Software Qualification.** If the article includes a digital computer, develop the software according to RTCA/DO-178B, *Software Considerations in Airborne Systems and Equipment Certification*, dated December 1, 1992, or the most current revision.

e. **Electronic Hardware Qualification.** If the article includes a complex custom micro-coded component, develop the component to the guidance in FAA advisory circular (AC) 20-152, *RTCA, Inc. Document RTCA/DO-254, Design Assurance Guidance for Airborne Electronic Hardware*. The hardware design assurance level should be consistent with the failure condition classification defined in paragraph 3.b of this TSO.

f. **Deviations.** We have provisions for using alternate or equivalent means of compliance to the criteria in the MPS of this TSO. If you invoke these provisions, you must show that your equipment maintains an equivalent level of safety. Apply for a deviation under 14 CFR § 21.609 before submitting your data package.

4. **MARKING.**

   a. Mark at least one major component permanently and legibly with all the information in 14 CFR § 21.607(d) except for the following:

      (1) 14 CFR § 21.607(d)(2). Use the name, type, and part number. Do not use the optional model number.

      (2) 14 CFR § 21.607(d)(3). Use the date of manufacture. Do not use the optional serial number.

   b. Also, mark the following permanently and legibly, with at least the manufacturer’s name, subassembly part number, and the TSO number:

      (1) Each component that is easily removable (without hand tools);
(2) Each interchangeable element; and

(3) Each subassembly of the article that you determined may be interchangeable.

c. If the component includes a digital computer, then the part number must include hardware and software identification. Or, you can use a separate part number for hardware and software. Either way, you must include a means to show the modification status.

**NOTE:** Similar software versions, approved to different software levels, must be differentiated by part number.

d. Consider identifying deviations granted to the article by marking “Deviation. See installation/instruction manual (IM)” after the TSO number. You can abbreviate the marking to “(Dev. See IM).”

e. When applicable, identify the equipment as an incomplete system or state that the article performs functions beyond those described in paragraphs 3 and 3.a of this TSO.

5. **APPLICATION DATA REQUIREMENTS.** As a TSO manufacturer-applicant, you must give the FAA aircraft certification office (ACO) manager responsible for your facilities a statement of conformance, as specified 14 CFR § 21.605(a)(1) and one copy each of the following technical data to support your design and production approval. (Under 14 CFR § 21.617(a)(2), LODA applicants submit the same data through their civil aviation authority):

a. Operating instructions and equipment limitations in an IM, sufficient to describe the equipment’s operational capability. Describe any deviations in detail. If needed, identify equipment by part number, version, revision, and criticality level of software/hardware, classification for use, and environmental categories.

b. Installation procedures and limitations in an IM, sufficient to ensure that the DLR system, when installed according to the installation procedures, still meets this TSO’s requirements. Limitations must identify any unique aspects of the installation. Finally, the limitations must include a note with the following statement:

   The conditions and tests for TSO approval of this article are minimum performance standards. Those installing this article, on or in a specific type or class of aircraft, must determine that the aircraft installation conditions are within the TSO standards. TSO articles must have separate approval for installation in an aircraft. The article may be installed only according to 14 CFR part 43 or the applicable airworthiness requirements.

c. Schematic drawings of the installation procedures.
d. Wiring diagrams of the installation procedures.

e. List of components, by part number, that make up the DLR system complying with the standards under this TSO. Include vendor part number cross-references, when applicable.

f. A component maintenance manual (CMM), covering periodic maintenance, calibration, and repair, for the continued airworthiness of the installed DLR system. Include recommended inspection intervals and service life. Describe the details of deviations granted, as noted in paragraph 5.a of this TSO.

g. Material and process specifications list.

h. The quality control system (QCS) description required by 14 CFR §§ 21.143 and 21.605(a)(3), including functional test specifications. The QCS should ensure that you will detect any change to the equipment that could adversely affect compliance with the TSO MPS, and reject the item accordingly. (Not required for LODA applicants.)

i. Manufacturer’s TSO qualification test report.

j. Nameplate drawing with the information required by paragraph 4 of this TSO.

k. List of all drawings and processes (including revision level) that define the article’s design. For a minor change, follow the directions in 14 CFR § 21.611(a). Show any revisions to the drawing list only on our request.

l. An environmental qualifications form as described in the environmental qualifications document reference in paragraph 3.c of this TSO for each component of the system.

m. If the article includes a digital computer: a plan for software aspects of certification (PSAC), software configuration index, and software accomplishment summary. We recommend that you submit the PSAC early in the software development process. Early submittal allows us to quickly resolve issues, such as partitioning and determining software levels.

n. If the article includes a complex micro-coded component: a plan for hardware aspects of certification (PHAC), hardware verification plan, top-level drawing, and hardware accomplishment summary. We recommend that you submit the PHAC early in the software development process. Early submittal allows us to quickly resolve issues.

6. **MANUFACTURER DATA REQUIREMENTS.** Besides the data given directly to us, have the following technical data available for review by the responsible ACO or civil aviation authority:
a. Functional specification specific emission for qualifying each production article to ensure compliance with this TSO.

b. Equipment calibration procedures.

c. Corrective maintenance procedures within 12 months after TSOA or LODA.

d. Schematic drawings.

e. Wiring diagrams.

f. Material and process specifications.

g. The results of the environmental qualification tests conducted per RTCA/DO-160E or the most current revision.

h. If the article includes a digital computer, the appropriate documentation defined in RTCA/DO-178B, including all data supporting the applicable objectives in Annex A, Process Objectives and Outputs by Software Level.

i. If the article includes a complex micro-coded component, the appropriate hardware life cycle data in combination with design assurance level, as defined in RTCA/DO-254, Appendix A, Table A-1.

7. **FURNISHED DATA REQUIREMENTS.** If furnishing one or more articles manufactured under this TSO to one entity (such as an operator or repair station), provide the following:

   a. One copy of the data in paragraphs 5.a through 5.f of this TSO. Add any other data needed for the proper installation, certification, and use, or for continued airworthiness, or both, of the DLR system.

   b. If the article performs functions beyond those described in paragraphs 3 and 3.a of this TSO, send one copy of the data in paragraphs 5.l through 5.n.

8. **HOW TO GET REFERENCED DOCUMENTS.**

b. Order EUROCAE ED-112 from EUROCAE, 17 Rue Hamelin, 75783 Paris Cedex 16, France. Telephone 33 1 45 05 71 88, fax 33 1 45 05 72 30. You can also order copies from the EUROCAE Internet website at www.eurocae.org.

d. You can find a current list of technical standard orders and advisory circulars on the FAA Internet website Regulatory and Guidance Library at www.airweb.faa.gov/rgl. You will also find the TSO Index of Articles at the same site.
