## Basic Quadratic Equation Program for TI-83/84

To write the program:
Select: [PRGM] key, select New, type "QUAD" using letter keys, press [ENTER] (this opens the new program)

Select: [PRGM], I/O, Prompt, press [ENTER], type: [ALPHA]A[,] [ALPHA]B[,] [ALPHA]C, press [ENTER] (there should be a comma between each letter.)

Write the following equations using Alpha/Numeric keys

$$
\begin{aligned}
& :\left(-\mathrm{B}+[\mathrm{sqrt}]\left(\mathrm{B}^{2}-4 \mathrm{AC}\right)\right) /(2 \mathrm{~A})[\mathrm{STO}] \mathrm{X}, \text { press [ENTER] } \\
& :\left(-\mathrm{B}-[\mathrm{sqrt}]\left(\mathrm{B}^{2}-4 \mathrm{AC}\right)\right) /(2 \mathrm{~A})[\mathrm{STO}] \mathrm{Y}, \text { press [ENTER] }
\end{aligned}
$$

Select: [PRGM], I/O, Disp, type: "ROOTS EQUAL" (with quotes) [,][ALPHA]X [,] [ALPHA]Y, press [ENTER]

Press [2 $\left.{ }^{\text {nd }}\right]$ [MODE] to QUIT program and save.
Final Program should look like this: (select edit

$$
\begin{aligned}
& : \text { Prompt A, B, C } \\
& : \frac{\left(-b+\sqrt{\left(b^{2}-4 a c\right)}\right)}{(2 a)} \rightarrow \mathrm{X} \\
& : \frac{\left(-b-\sqrt{\left(b^{2}-4 a c\right)}\right)}{(2 a)} \rightarrow \mathrm{Y} \\
& : \text { Disp "ROOTS EQUAL",X, Y }
\end{aligned}
$$

To use the program:
Press [PRGM] key, select QUAD, press [ENTER] twice to start program Program will then ask for $\mathrm{A}=$ ?, $\mathrm{B}=$ ?, and $\mathrm{C}=$ ?
Enter value for A, B, and C pressing [ENTER] after each value Program will then display the two roots if they are real.

Note: If you make an error in the program, you can go back in the Edit Mode and make changes. If there is a syntax error, select GoTo to see the error and correct it. Save changes by QUITing the program.
