Today's Goals

- What *is* Math Anxiety?
- Common Misconceptions
- Missing Building Blocks
- Overcoming Objections
- Resources

Do these symbols cause your heart to race,
your palms to sweat,
and your breakfast to try to re-appear?

IF SO.....

**YOU MAY SUFFER
FROM**

MATH ANXIETY!

What *is*

MATH

ANXIETY???

MATH ANXIETY is a type of **FEAR**

Overcoming math anxiety

HOW DO WE OVERCOME
MATH ANXIETY?

Tips

➤ ISOLATE IT

➤ EXAMINE IT

➤ ANALYZE IT

Isolate It By:

- Doing math every day
- Getting organized
- Having quality study time

Examine It By:

- Attending class
- Asking questions
- Testing yourself continually

Analyze It By:

- Studying smart
- Replacing negative self-talk with positive self-talk
- Managing your time

Utilize **ALL** Your Resources!

Common Misconceptions

“I’m just not cut out for math!”

Your approach to math may not be the same as your classmate’s, but it is no less effective.

**There is not one type of brain
that is better at math than another.**

CONFIDENCE

DON'T ACCEPT STEREOTYPES

Common Stereotypes

- Only some people can be good at math
- Girls have less potential in math
- Math problems are not realistic or relevant to everyday life

ALL NEGATIVE!

Think Positive Thoughts

What Building Blocks Are Missing?

Building Blocks Include:

- Knowledge of Math language and vocabulary
- Basic addition and multiplication facts
- Fractions skills
- Order of operations
- Decimals
- Percent

Tips

✓ Skim lower level textbook

✓ Take a refresher course

✓ You are not as behind as you *think* you are

Overcoming Objections

“It’s just so boring.”

“IT TAKES TOO MUCH TIME”

“It’s too complex to understand!”

- Break it down

- Build with the blocks

Anxiety over time commitment

- Leads to procrastination
- Overcome by acknowledging this fear
 - You can “step away” for a while
 - You won’t miss something
- Other things *can* wait for 1 -2 hours

The Mysterious Fractal

Solving Mysteries can be Gratifying!

REMEMBER!

*Do not worry
about your
difficulties in
mathematics, I
assure you that
mine are
greater.*

- Albert Einstein

OTHER MATH MYSTERIES

- Connection between music and math
- Infinity
- Math riddles
- Math games

The 11 Times Trick

- Take the original number and imagine a space between the two digits (in this example we will use 52):
- 5_2
- Now add the two numbers together and put them in the middle:
- 5_(5+2)_2
- That is it – you have the answer: 572.

The 11 Times Trick

- If you need to square a 2 digit number ending in 5, you can do so very easily with this trick. Multiply the first digit by itself + 1, and put 25 on the end. That is all!
- $25^2 = (2 \times (2+1)) \& 25$
- $2 \times 3 = 6$
- 625

Multiply by 5

- Take any number, then divide it by 2 (in other words, halve the number). If the result is whole, add a 0 at the end. If it is not, ignore the remainder and add a 5 at the end. It works everytime:
- $2682 \times 5 = (2682 / 2) \& 5 \text{ or } 0$
- $2682 / 2 = 1341$ (whole number so add 0)
- 13410

Multiply by 9

- This one is simple – to multiply any number between 1 and 9 by 9 hold both hands in front of your face – drop the finger that corresponds to the number you are multiplying (for example 9×3 – drop your third finger) – count the fingers before the dropped finger (in the case of 9×3 it is 2) then count the numbers after (in this case 7) – the answer is 27.

Multiply by 4

- This is a very simple trick which may appear obvious to some, but to others it is not. The trick is to simply multiply by two, then multiply by two again:

Calculate a Tip

- If you need to leave a 15% tip, here is the easy way to do it. Work out 10% (divide the number by 10) – then add that number to half its value and you have your answer:
- $15\% \text{ of } \$25 = (10\% \text{ of } 25) + ((10\% \text{ of } 25) / 2)$
- $\$2.50 + \$1.25 = \$3.75$

Tough Multiplication

- If you have a large number to multiply and one of the numbers is even, you can easily subdivide to get to the answer:
- 32×125 , is the same as:
 16×250 is the same as:
 8×500 is the same as:
 $4 \times 1000 = 4,000$

Dividing by 5

- Dividing a large number by five is actually very simple. All you do is multiply by 2 and move the decimal point:
- $195 / 5$
- Step1: $195 * 2 = 390$
Step2: Move the decimal: 39.0 or just 39
- $2978 / 5$
- step 1: $2978 * 2 = 5956$
Step2: 595.6
