Lean Six Sigma Green Belt

Lean Six Sigma (LSS) certification courses are now available through Gulf Coast State College. Earn your Lean Six Sigma Green Belt and enhance your value to current and potential employers.

LSS is a disciplined process improvement approach focused on reducing waste, increasing customer satisfaction, and reducing variability for improved profits. Green belts are typically process managers / leaders who manage a couple of projects each year in their function-specific area of the organization while maintaining their regular

work duties. The LSS Green Belt course artfully blends the tools of Lean with the rigorous DMAIC (Define, Measure, Analyze, Improve, Control) problem-solving methodology and statistical toolset. This course will blend online coursework and live project participation.

Other courses that will be available include Manufacturing Skills Standards Council—Certified Production Technician. (MSSC-CPT).
