

Intro to Materials 100

The “Intro to Materials 100” class discusses four basic types of materials used in manufacturing (i.e., metals, plastics, ceramics, and composites).

Write four paragraphs, one for each type of material. Explain the basic properties of each material. Make clear the advantages or disadvantages of those properties.

Writing tips

Begin each paragraph with a sentence that states the topic that paragraph will cover. This topic sentence will help your reader understand exactly what is coming in the rest of the paragraph.

Also make sure that **each sentence is complete and clear** on its own. If a sentence is confusing, the whole report may not make sense to your reader.

Read your paragraphs **out loud** when you are done to help you check for errors or confusing structures.
