

Lubricant Fundamentals 130

This class discusses the purpose of lubrication, types of lubricants, lubricant application and delivery methods.

Describe the three main types of lubricants and how these lubricants are applied to machines. Write your answer in three paragraphs.

Be sure to use as many vocabulary words as possible from the vocabulary list at the beginning of the class, and underline each one that you do use.

Writing tips

As you begin a paragraph, give your reader a general statement of the topic covered in that paragraph and then provide the details. Each paragraph should focus on one topic.

Also make sure that **each sentence is complete and clear** on its own. Read your work out loud when you are done to help you find confusing or incorrect sections.
