28. This drawing shows a storage tank for flammable liquid.

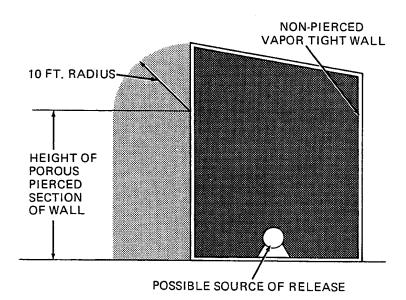

The enclosed area above the \_\_\_\_\_\_ of the liquid is considered the most hazardous area.

- 29. The \_\_\_\_\_ and any other \_\_\_\_ at the top of the tank are also identified as Division 1.
- 30. This drawing shows a compressor or pump installed in an adequately ventilated building.

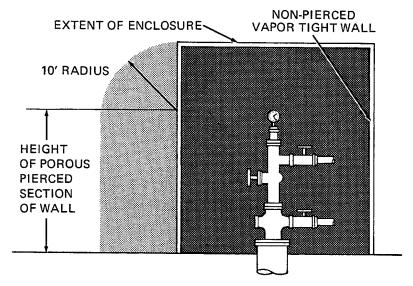

Because the building is adequately ventilated, the interior of the building will be identified as a Division \_\_\_\_\_\_area.

31. This drawing shows a similar pump or compressor installation.

But this building is not adequately \_\_\_\_\_\_

- 32. Vapors or gases could concentrate ( on the floor of the building / throughout the entire height of the building ).
- 33. So, the entire building interior is classified as Division
- 34. Here is another flowing well installation.

Unlike the wellheads shown previously, this one is

- 35. There is no mechanical \_\_\_\_\_ system.
- 36. So, the entire enclosure must be rated as Division

37.	Classify these areas according to Division 1 or Division 2:
	Concrete cellar around flowing well installation.
	( 1/2 )
	Three-foot radius around the stuffing box on a beam pumping well.
	(1/2)
	Surface of the liquid in a flammable liquid storage tank.
	( 1/2 )
	Vents for liquid vapors or gases.
	( 1/2 )
	An adequately ventilated building used to house a gas compressor.
	( 1/2 )
38.	A lease operator is not responsible for the actual placement of permanent electrical installations.
	But, if a lease operator recognizes that an electrical installation in a Class I area does not meet Class I requirements, he should notify his
39.	An operator is also responsible for making sure that electrical tools such as drills meet the requirements of the area in which the operator is working.
40.	The lease operator can do his part to insure that electrical equipment is:
	approved for use in the area in which it is installed.
	located as far away from a Class I area as possible.
	THE END
